3- Installing the template **without** the Clone Installer package _____ 5

4- Template and Extensions Parameters _____ 6

5- Module Variations _____ 13

6- More Information _____ 14

1- Introductions

These instructions are for installing the template and its associated extensions, with or without the Clone Installer package.

The Clone Installer package is very helpful and enables you to setup the template exactly as it is on the demo. If you already have a running Joomla! website, you should not use the Clone Installer package.

The setup instructions for installing with and without the Clone Installer package are shown below.

The IT GamerZone All in One package (IT_GamerZone-(unzip-first)-xxxxxxxxxx.zip) contains the following files.
Note that the files of this package should be extracted first on your computer.

1. IT_ GamerZone _Template_V1.0.0.zip
2. mod_IceMenu.zip
3. mod_PixSearch.zip
4. mod_ice_tabs.zip
5. plg_ice_speed.zip
6. mod_IceAccordion.zip
7. mod_ice_caption.zip
8. K2_v2.4.1.zip
9. AdvancedModuleManager-v1.14.0.zip
10. Clone_Installer_Joomla..zip
11. installation_guide.pdf

From the list above you will note that for this Joomla template there are available the template,8 extensions, Clone Installer package which can make your website exactly as our demo and the Installation Guide which in fact is this document that you are viewing.

All the files above from number 1 to 9 should be installed through the default Joomla! Installation process in Joomla! Administrator.

2- Intalling the template with the Clone Installer package

If you plan to use the “Clone Installer” package all you have to do is to upload the content of “Clone_Installer_Joomla-x.x.x” on your desired directory and begin the default installation process as described by Joomla!

Note that **you must install the “sample data” on the 6th step of the installation process** so that your database should be updated with our template data. Also if you make use of the Clone Installer package, all files from 1-9, that are found inside the All in One package, should not be used as they are by default on the Clone Installer package, so you don’t have to install anything from the Joomla! Installation page in Joomla! Administrator, after you have completed the installation process.

The Clone Installer package will save you a lot of times as you don’t have to set parameters for the extensions and for our template plus you have the content set up by default. So making use of this package is extremely recommended for websites that begin from scratch.

Also you may check our Installation Guide Video that we have made on How to Install the Clone Installer.

For more information how to install Joomla please follow the Joomla QuickStart page

3- Intalling the template without the Clone Installer package

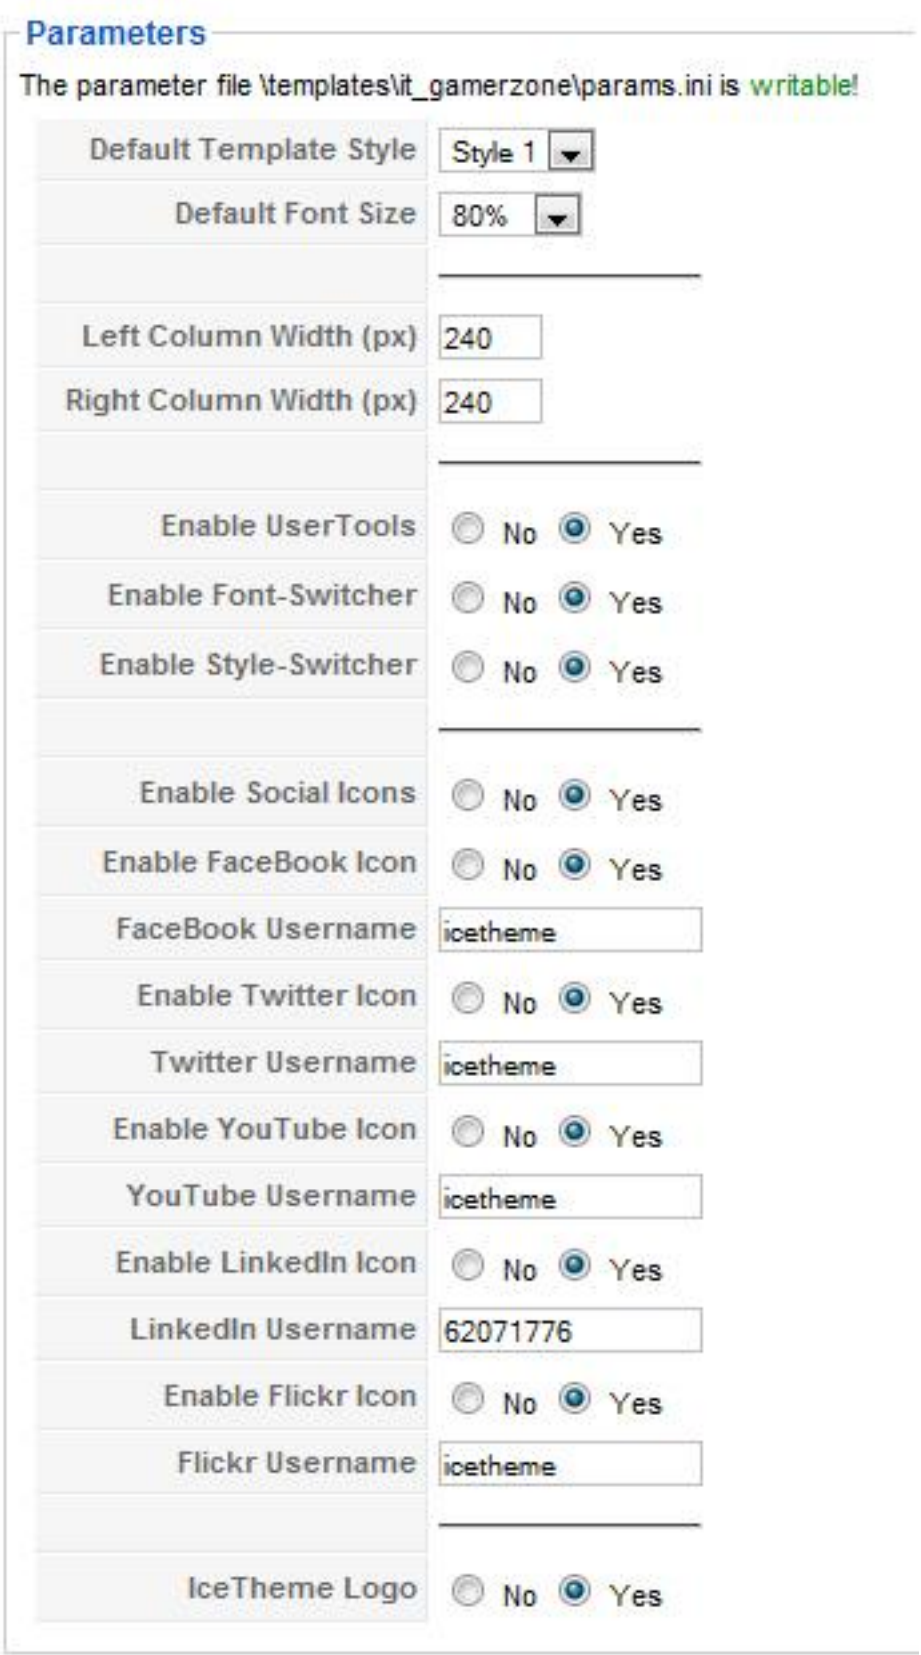

Note:
The instructions below assume that you have first successfully installed Joomla on your server. For more information on how to install Joomla please follow the Joomla QuickStart page

1) Extract the content of the IT GamerZone All in One package on your computer.
2) Install IT_GamerZone_Template_V1.x.x.zip from Joomla Administrator – Install/Uninstall
3) Install in the same way the following extensions which are on the package.

   a. mod_IceMenu.zip
   b. mod_PixSearch.zip
   c. mod_Ice_Tabs.zip
   d. plg_Ice_Speed.zip
   e. mod_IceAccordion.zip
   f. mod_ice_caption.zip
   g. K2_v2.4.1.zip
   h. AdvancedModuleManager-v1.14.0.zip

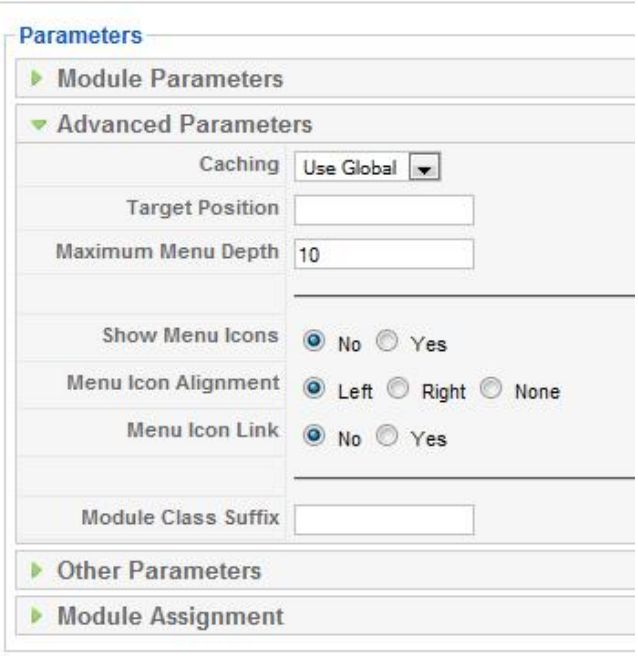

After you have successfully installed all the above files on your Joomla! Website you need to edit for each extension and for the template their parameters. You may view the default parameters from the guide below, but you may change them with your desired ones.

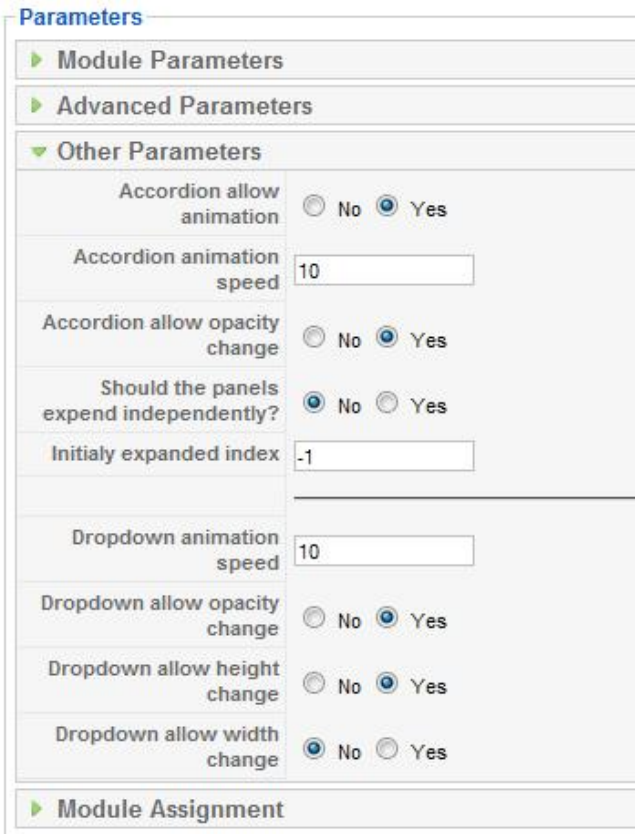

1- IT GamerZone template parameters

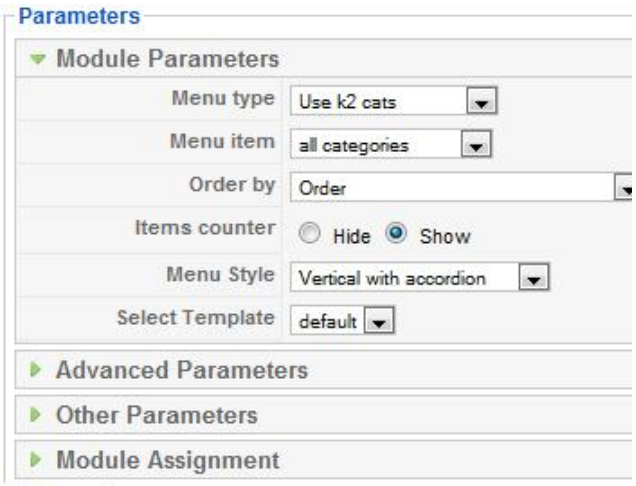

2- IceMenu Module (DropDown)

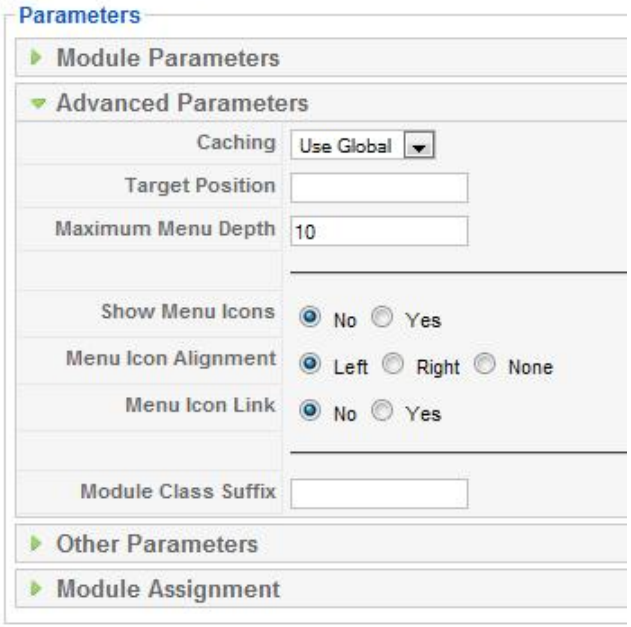

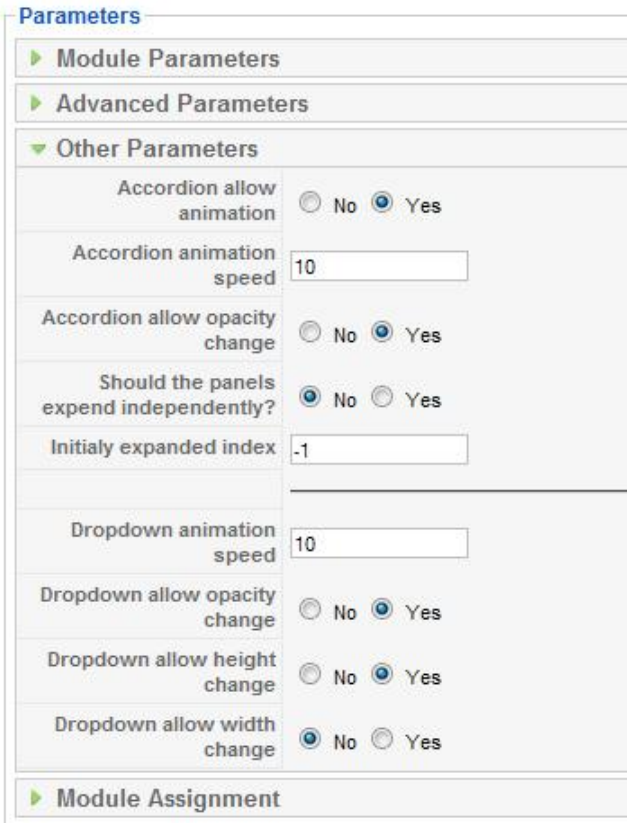

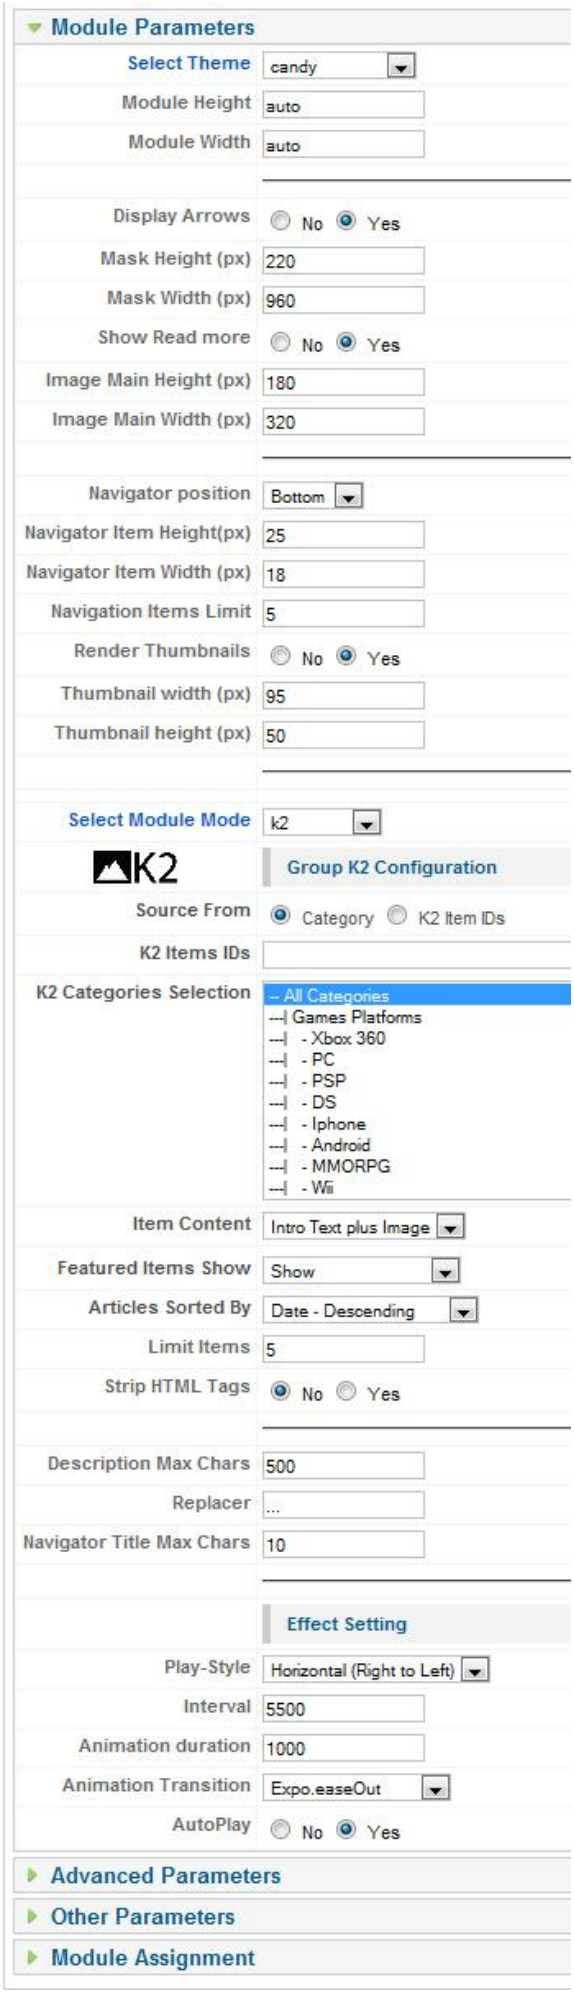

3- IceMenu Module (K2 Mode)

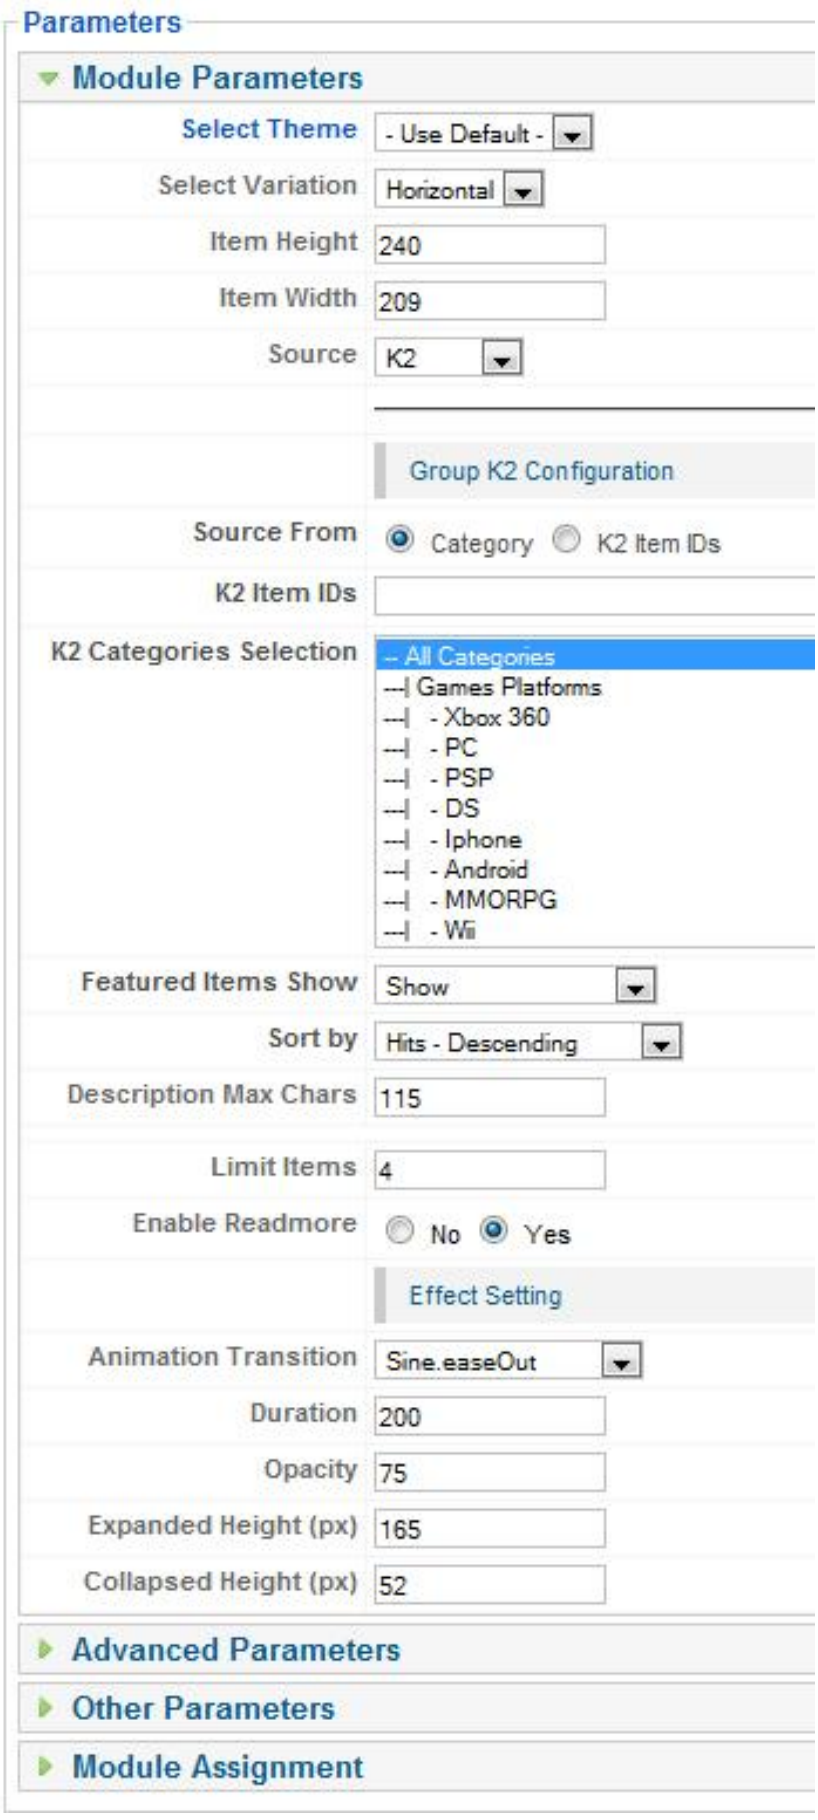

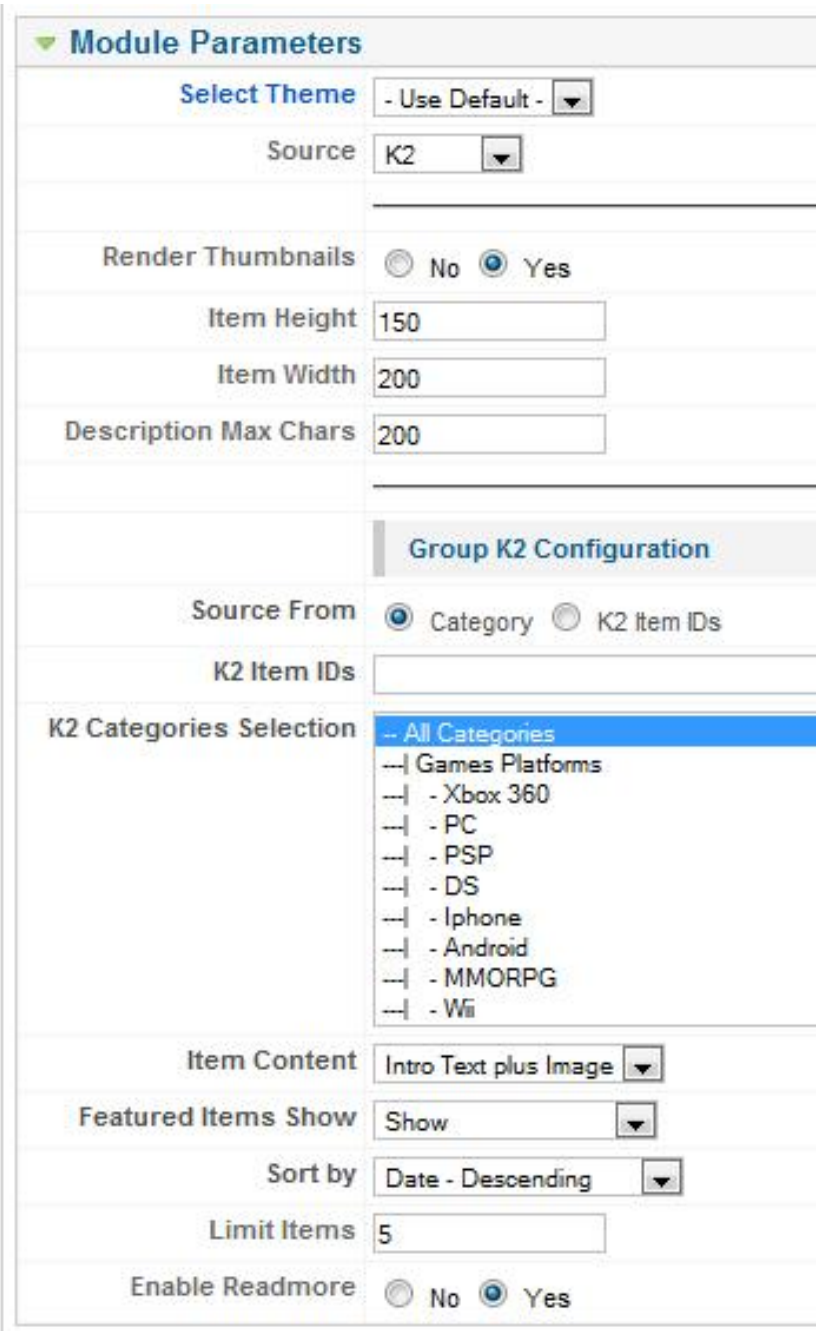

4- IceTabs Module

5- IceCaption Module

6- IceAccordion Module

7- Ajax Search Module

8- Advanced Module Manager

Advanced Module Manager is an extension that changes the way your Module manager works. It adds a few functions.

- See what modules are active for the menu item you are editing
- Edit modules in modal popup windows
- Option to not show modules that have no output (handy for things like dynamic menus)
- Option to show modules on all pages except the selected menu items (reverse functionality of normal selection)
- Many other publishing limits for your modules! You can limit by (AND/OR)

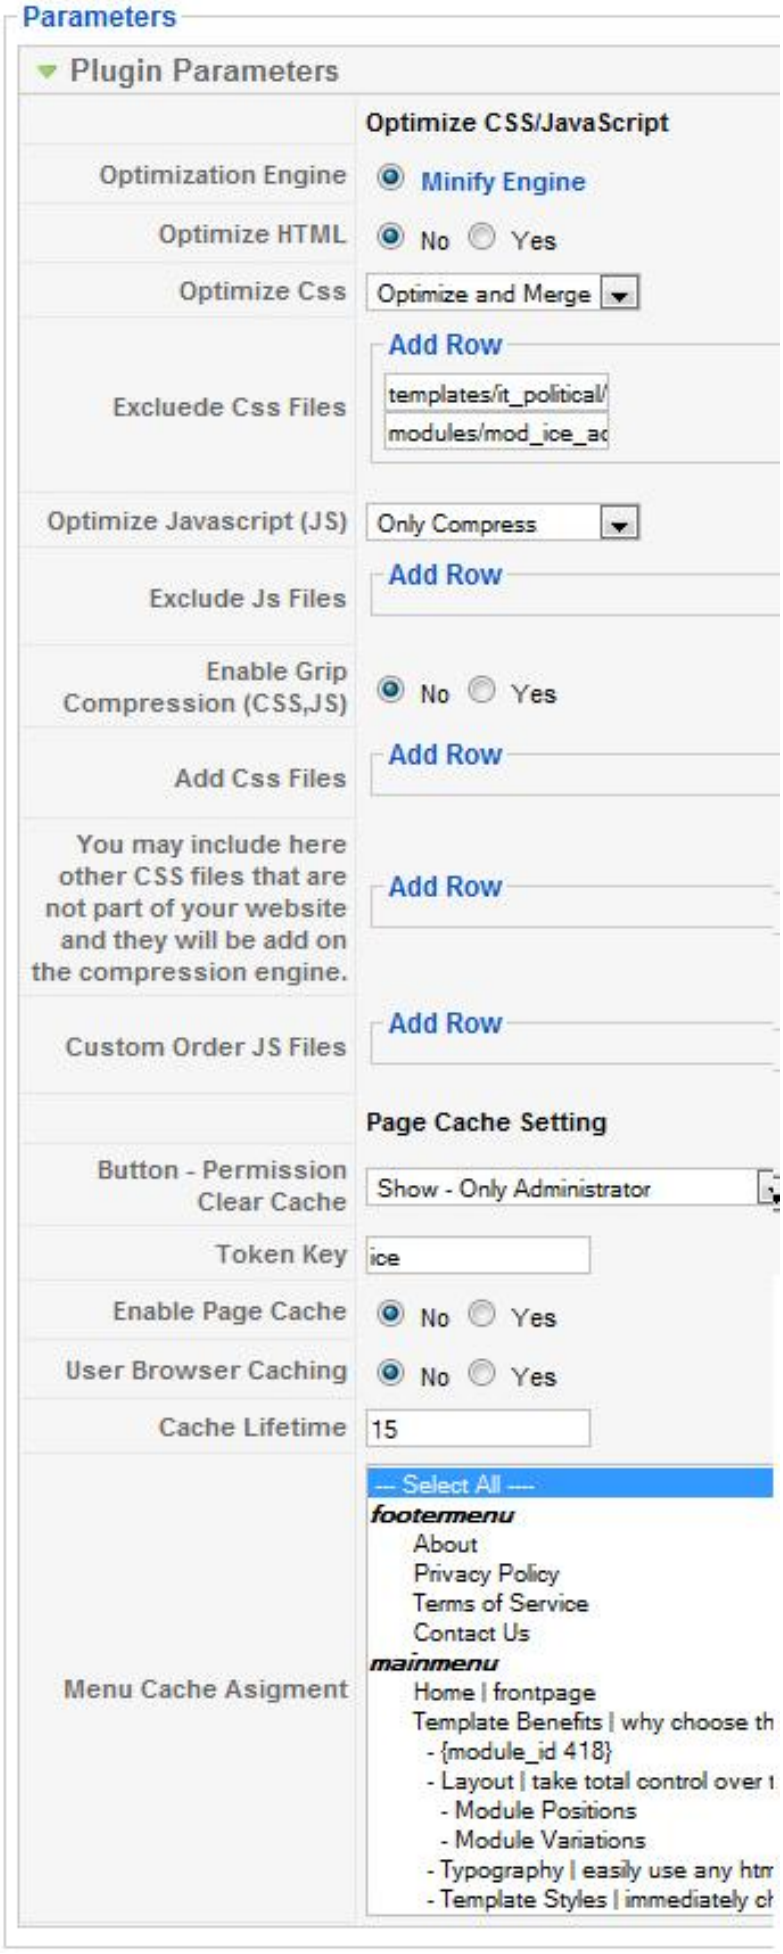

9- K2

K2 provides an out-of-the box integrated solution featuring rich content forms for items (think of Joomla! articles with additional fields for article images, videos, image galleries and attachments), nested-level categories, tags, comments, a system to extend the item base form with additional fields (similar to CCK for those acquainted with Drupal), a powerful plugin API to extend item, category and user forms, ACL, frontend editing, sub-templates and a lot more!

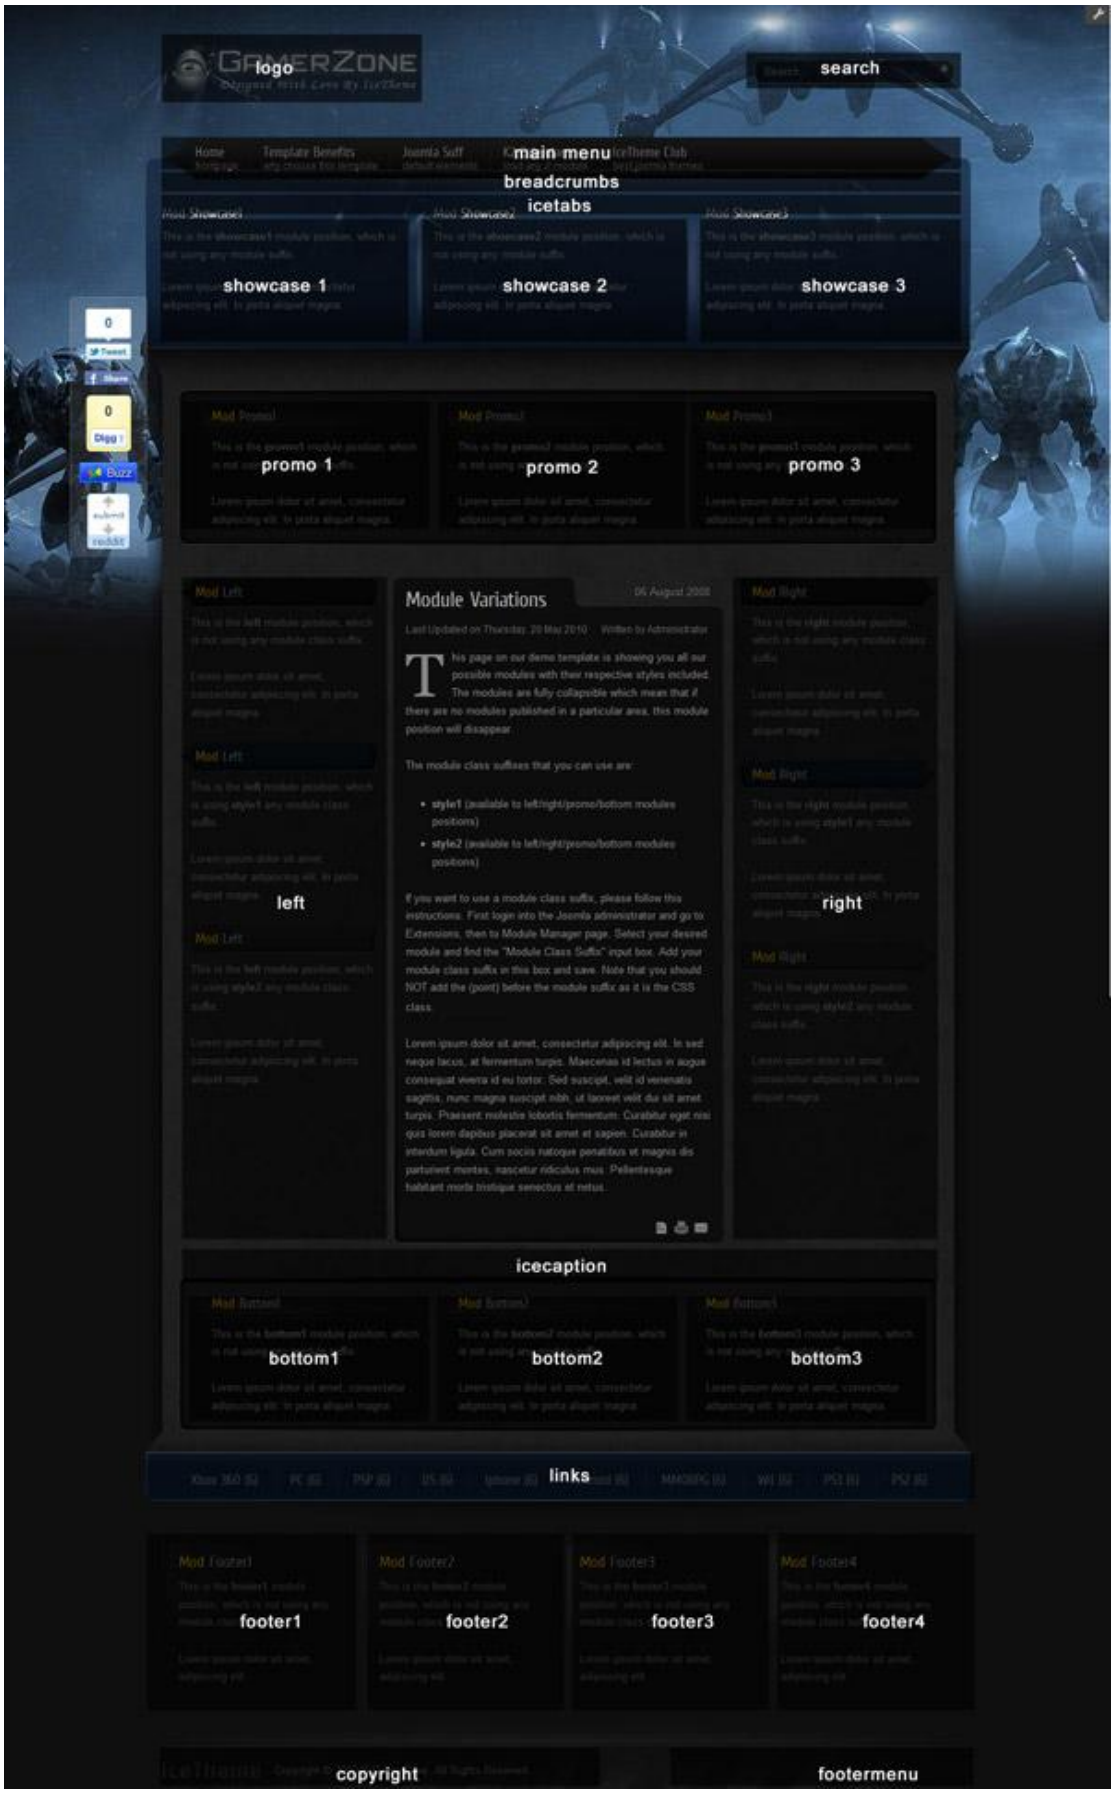

Using K2, you can transform your Joomla! website to a news/magazine site with author blogs, product catalogs, work portfolio, knowledge base, download/document manager, directory listing, event listing and more, all this bundled under one package!

Give K2 a try and you'll instantly love it! It's easy to use and fun to develop websites with! If you need any help or want to contribute to the project, join us at the K2 community.

10- IceSpeedPlugin

5- Modules Positions

6- More Information

For more information on this template and other extra features like the module variations, Template typography, layout setting etc, please visit the IT GamerZone Demo page
